REGRIND PACKING GUIDE

How to pack blades for resharpening

Keep cutting edges from striking each other.

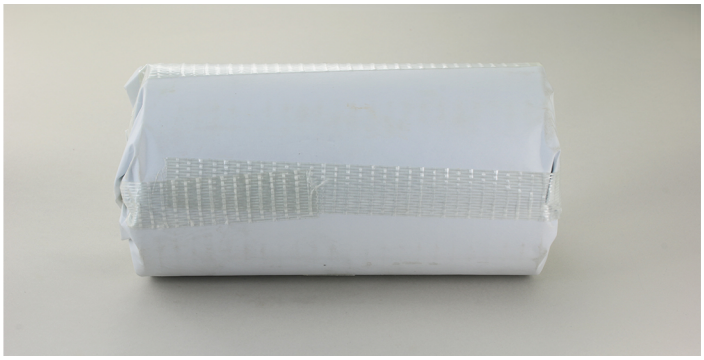

Regrinds need simple packaging that keeps cutting edges separated.

1 Wrap the blades in paper

Roll blades in poly-coated paper. Ordinary paper is fine if poly-coated paper is unavailable.

Keep paper between the cutting edges.

A completed wrapped roll.

These photos show extra protection used for new blades. Regrinds need less packaging, but cutting edges must stay separated.

2 Choose a packing option

WRAPPED ROLLS WITH A DIVIDER

Separate wrapped rolls with a cardboard divider. Shown in a sturdy 2-ply box.

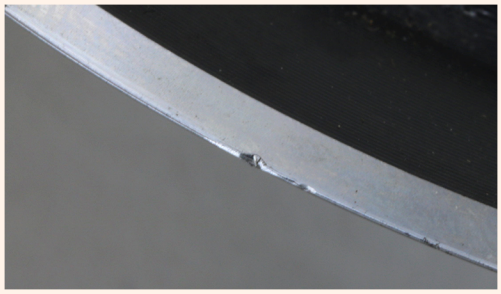

OPTIONAL REGRIND RETURN BOX

Send regrinds regularly? Ask us about a small return box we can send for your blades.

Why packing matters

Shipping nicks can be deeper than normal wear. Reworking them may further reduce the blade's outside diameter (OD). The extra work needed for deep nicks may incur additional costs.

Keep edges separated to help prevent unnecessary costs and diameter loss.

TRANSIT DAMAGE

Nick caused during shipping

IMPROPER PACKING

Loose blades can strike each other
